AED Cabinet with Emergency Phone

Parking and General Help Phone

Wheelchair Lift Phone

### A History of Service

Kings III Emergency Communications has been the leading supplier of turnkey, complete emergency telephone solutions to public and private property management, owners and developers for nearly twenty years. What sets us apart is our knowledge of relevant emergency phone codes and our full vertical integration. Kings III does not simply sell emergency phones; we design, engineer, manufacture, install and service complete emergency communication solutions.

When we began in 1989, we had one goal and it was to provide the reliable, turnkey emergency communication system that codes and our clients required and include full maintenance/repair service and the highest quality monitoring and dispatch services for the lowest price possible. After all these years and over 30,000 emergency telephone installations, this is still the goal we strive to meet every day.

### Owners and Managers at Risk

In the totality of building operations, emergency telephone systems are often viewed as a minor consideration by owners, managers and even their vendors. While emergency phones may represent a tiny portion of your annual budget, the consequences of a poor vendor choice can be huge. Kings III is the one stop, complete solutions vendor that can assure you that your emergency communication solutions are state-of-the-art and exactly what you, your tenants and codes require.

### Solutions for Every Need

We have the ideal phone solution for all the places emergency communications systems are required by local, state, national and international codes:

- ▶ In Elevators
- ▶ Warehouses
- ▶ Areas of Refuge
- ▶ Labs
- ▶ Emergency Fire Stairs
- ▶ Vaults
- ▶ Parking Areas
- ▶ ATM's
- ▶ Defibrillators
- ▶ Fitness Centers

Not only do we offer emergency phones for most applications, we also make sure they are compliant with all applicable safety and accessibility codes including:

- ▶ AMSE A17.1-2000, 2004, 2007
- ▶ ASME A17.3-2002, 2005, 2008
- ▶ CSA B44-2004, 2007
- ▶ IBC-2003
- ▶ Americans with Disabilities Act
- ▶ State Accessibility Codes
- ▶ FCC Registered and UL Approved

### Monitoring and Dispatch

Most people give little thought to who answers emergency calls, how the operators are trained or what best practice procedures are appropriate. At Kings III's Emergency Dispatch Center, we are continually thinking about these issues and work to provide the best monitoring and dispatch services.

Our Emergency Dispatch Center is dedicated solely to answering and dispatching emergency calls. We are not a commercial answering service. Every call is answered by a live operator, not an auto-attendant. Every operator is trained to handle emergency telephone calls. In addition to our rigorous training, each operator is Red Cross CPR certified and our shift leaders and supervisors are Advanced Emergency Medical Dispatcher certified. You can be assured that Kings III operators will expertly handle any emergency call, professionally dispatch the proper response and provide appropriate instructions to first responders from simple first aid to CPR and defibrillator use.

### Full Redundancy

In addition to the benefits of our trained and dedicated operators, we have built complete redundancy into our Emergency Dispatch Center. We maintain back-up power generators, monitoring computers and telephone systems and even a complete, off-site Dispatch Center.

### Savings Through Patented Technology

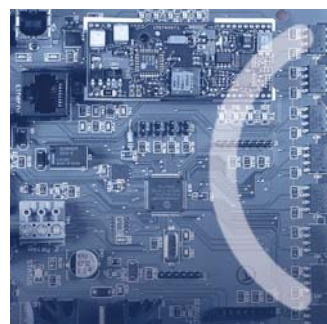

Kings III's patented telephone line seizure technology produces code compliant emergency telephone systems that can actually save you money...every month. We do this through our class leading telephone and dialer technologies that allow up to eight emergency telephones to "share" a single telephone line and retain simultaneous operation capability. Furthermore, this technology enables us to actually "capture" an existing telephone line, regardless of whether or not the line is currently in use, and place the emergency call over that seized phone line.

Among the most common phone lines used for this purpose are:

- ▶ Fax Lines
- ▶ Access Control
- ▶ Back Office Lines
- ▶ Secondary /Back-up Fire Lines
- ▶ HVAC Lines

With the price of a single business telephone line averaging more than \$49.00 nationwide, our unique line sharing solution can eliminate these costly dedicated emergency telephone lines and actually reduce your phone line expense.

## TURNKEY Solutions Include Everything

You no longer have to coordinate emergency telephone installation, repair and monitoring among multiple vendors. Kings III provides it all in one convenient and affordable package that includes all necessary equipment, installation and repair along with monitoring and dispatch services at a low, fixed price.
